The **DeLeón** is named after the famous explorer Ponce de León, who searched Florida looking for treasure and the fountain of youth.

The **DeLeón's** display screen is one character high by eight characters wide. It is larger and easier to read than the Cortés display.

The **DeLeón** is a Target Identification Detector or T.I.D. The **DeLeón** is designed as an easy to use, turn-on-and-go detector. The faceplate has only four controls: Sensitivity, Discriminate, Threshold and a Mode Switch. It uses the same circuitry as the Cortés, so you can expect the same depth and sensitivity from the **DeLeón** that the Cortés is already well known for.

Cortés Circuitry... Silver Sabre Simplicity

Starting from left to right on the illustration, you will see that the **DeLeón** has a Coin Depth reading, a five segment bar graph and a two digit Target ID Number. The bar graph shows several categories for ID purposes, but we recommend that it be used with the ID Number for the most accurate information.

Features

|-------------------------|-------------------------|
| Microprocessor Control | Battery Level Indicator |
| Digital Target ID | Preset Ground Balance |
| 5 Segment Bar Graph | VLF 10 kHz Frequency |
| Two Digit ID Number | Drop-in Battery Packs |
| Coin Depth Indicator | Lifetime Warranty |
| 9" x 8" Concentric Coil | |

The **μMax** detector that you have been waiting for is here – the **Golden μMax**. This is a detector that only Tesoro could build. Full size depth, sensitivity, Four Tone Audio ID and a user adjustable Notch Filter Discriminate all placed into the lightest detector housing on the market. At less than 2-1/2 pounds, the **Golden μMax** lets you control what you want to find.

Our adjustable notch window lets you, not the engineers, decide how to pick through the pull tabs to find the nickels and gold rings, while the ED 120 discrimination knocks out all of the nasty iron. The tone ID gives you a great idea of what your target is. The **Golden μMax** will help you define your targets and make better use of your detecting time.
