## SILVER μMAX

Suggested Retail Price

# \$299

The Silver Sabre series has had a very long history with Tesoro Electronics. It was first introduced in 1983. In a time when "lunch box" detectors were the norm, the original Silver Sabre was perceived as a toy unit. Advertised as "strong, simple and silent," the Silver Sabre has gone through many changes over the years. The Silver Sabre Plus added a No-Motion All Metal circuit. The Silver Sabre II added a new plastic housing and new Hybrid Circuit technology. Several years ago we introduced the Silver Sabre μMax with an incredibly small housing and Max Boost technology. Many men bought one for their wife and wound up using it because it worked as well as any other detector.

We have decided to bring the Silver back full circle to where it started. The original Silver Sabre was a turn-on-and-go detector with Silent Search Discrimination and All Metal Modes.

The Silver μMax uses a microprocessor to control the audio tone and battery test. It comes with an 8" concentric coil and our latest plastic faceplate. The new Silver μMax returns to its roots and offers strong, silent, and simple operation once again.

### Features

Microprocessor Technology	VLF 10 kHz Frequency
Silent Search All Metal Mode	Interchangeable Coils
MicroMAX Design	One Drop-in 9-volt Battery
Silent Search DISC Mode	Built-in Mineral Rejection
Low Noise Circuitry	Push Button Battery Test
8" Concentric Coil	Lifetime Warranty

## Compadre

The Tesoro Compadre was designed with the idea that less is more. This modest machine can do a lot of the same things that its bigger brothers can do. It works great for coin hunting, competition hunting and relic hunting, but it does it without any excess knobs. Switch on the detector and you're working in a silent search, motion all metal mode. The farther you turn the knob, the more discrimination you can bring to bear on those trashy sites.

The Compadre has it all. One knob simplicity for the beginner and high gain circuitry and the famous Tesoro ED-180 discrimination for the advanced user. If one detector can do all of this, maybe less is more.

Suggested Retail Price

# \$189

### Features

Designed for All Ages	Built-in Mineral Rejection
VLF 12 kHz Frequency	Ultra-lightweight Design
Silent Search All Metal and Discriminate Modes	5.75" Concentric Coil
Single Knob Simplicity	3-piece Knockdown Pole
	Lifetime Warranty
